Nutrient composition (n = 3)		
DM, %	13.8	15.1
Neutral detergent fiber, % of DM	14.2	12.6
Crude ash, % of DM	4.61	4.31

NFC = non-fibrous carbohydrates calculated as 100 – [NDF + crude protein + crude ash + ether extract].
[1] From the input and output data in the packing house, the discarded amount of main individual ingredients during each month that constituted more than 90% of total discards were surveyed and thus collected for the respective experiment.

* Fruit and vegetable discards (FVD) were mixed with 2 g chemical mixture + 2 g sodium metabisulfite/kg fresh biomass and aerobically stored for 7 days at an outdoor environment.

Chemical mixture was based on sodium benzoate (57%), potassium sorbate (29%), and sodium nitrite (14%).

The treated FVD were included in TMR (as-fed basis) at 0, 10, or 20% level.
